

HELP

- How ADD button works?

When all the above input fields are filled with information of the accessory, then the add button can be used to add all the information to the table. The input fields of search by price and search by category is not necessary to be filled or selected since it is used only when to search the details about the accessories.

- How Open button from menu bar works?

The open button can be used to import values into the Table. Some certain values are stored in the txt extension file in the given path from where the values can be imported.

- How both Update button works?

When the table is filled with any information importing from open button then the row which consists of the information can be selected can “Update Table” button can be pressed which will fill the input fills in the Computer Accessories form.

Then the second “Update” button can be used to change the values in the table by inserting new values in the input fields.

- How Delete button works?

The row from the table should be selected and delete button should be clicked which will remove the row from the table.

- How both the Search button works?

When the information is filled in the Table either by adding individually or by importing from files, the details of the accessories can be search either by price or category. The corresponding input field from the search button is filled with price or any category is selected, and when searched the details of the accessory of that price or that category is displayed if the value provided matched with that of the table.

- How Clear button works?

When clear button is used all of the input field is cleared.
